Vendor Management System (iSupplier)

As a **Frontend Developer** on this project, my primary responsibility was to design and develop the user interface using Vue.js. I integrated the frontend with the backend, which was built with Express, ensuring seamless communication between the two through the provided API.

Additionally, I ensured that the user interface was fully responsive, functioning well across various devices, including desktops and mobiles. To maintain quality and consistency, I conducted thorough testing on each component to identify and resolve any bugs or performance issues.

Finally, I documented the entire development and integration process in detail, enabling other team members to easily understand and continue the development in the future.

Skills : Vuejs, Vuex (State Management), SCSS, Mysql

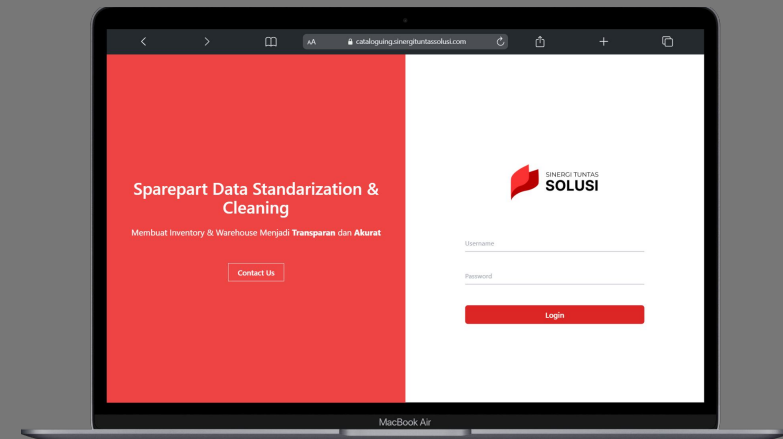

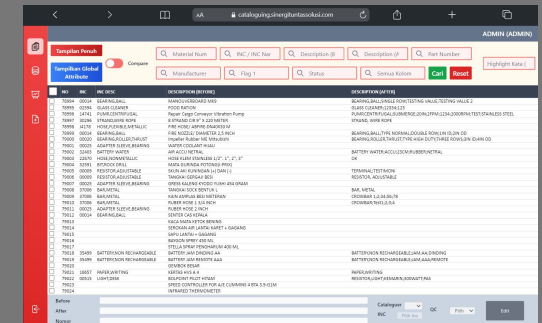

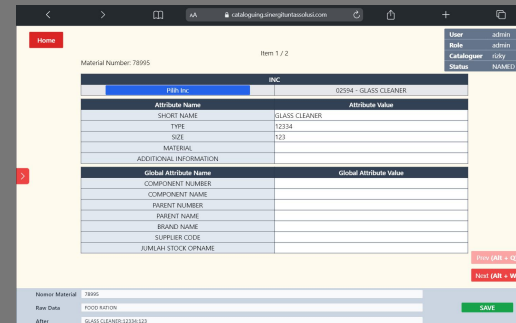

Item Cataloguing Tools

As a **Fullstack developer**, I meticulously crafted the user interface (UI) and user experience (UX), utilizing Vue.js for frontend development. Going beyond mere integration, I delved into backend development, meticulously crafting the API using PHP Codeigniter to facilitate seamless communication between the frontend and backend.

I also assumed responsibility for managing and optimizing the MySQL database, ensuring data integrity and efficient data retrieval. Throughout the development process, I rigorously tested each component to identify and eliminate any bugs or performance bottlenecks.

Skills : Vuejs, Vuex (State Management), Tailwind css, Mysql, Codeigniter

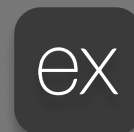

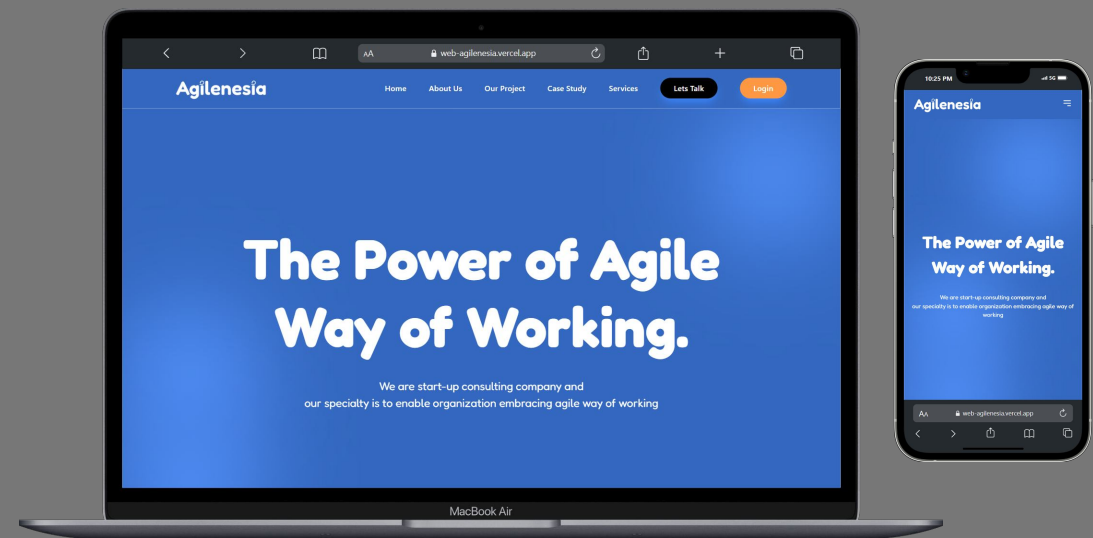

Web Company Profile

In this project, which involved creating a company profile website, I served as a **Fullstack Developer**. For the frontend, I utilized Vue.js to design and develop an interactive and user-friendly interface. On the backend, I employed Express.js to handle server-side logic and ensure efficient processing of requests. The database was managed using PostgreSQL, providing robust and reliable data storage.

This website is dynamic, allowing users to directly modify content through an intuitive content management system built into the site. My role encompassed integrating all these components to ensure seamless functionality and a cohesive user experience.

Skills : Vuejs, Vuex (State Management),
Tailwind css, ExpressJs, PostgreSql

Vendor Management System v1

In this project, I served as a **Frontend Developer**, where my primary responsibility was to redevelop an existing application. I enhanced the application by adding new features that were previously missing, ensuring a more comprehensive and user-friendly experience. Additionally, I addressed and fixed existing bugs to improve the overall functionality and performance of the application. Furthermore, I assisted in organizing and structuring the MySQL database to ensure efficient data management and retrieval.

Skills : Vuejs, Vuex (State Management), SCSS (css preprocessor), MySql
